Professional Summary

Computer Science undergraduate student with hands-on experience in Java, Python, and full-stack projects. Solid understanding of core CS concepts and eager for internship opportunities to apply skills.

Education

B.Tech – Computer Science and Engineering (3rd Year)	2023–2027
RGUKT IIIT Ongole	CGPA: 9.2 (till 5 th semester)
Pre-University Course (PUC)	2021–2023
RGUKT IIIT Ongole	CGPA: 9.85
SSC	2021
Lakshya EM High School	CGPA: 10

Technical Skills

- **Programming Languages:** Java, Python, C, Dart, PHP
- **Web Technologies:** React.js, React Native, HTML5, CSS3, JavaScript, RESTful APIs
- **Backend Technologies:** Node.js, NestJS, FastAPI, Flask
- **Databases:** MongoDB, Firebase Realtime Database
- **Cloud & Dev Tools:** Firebase, Git, GitHub, VS Code, Android Studio
- **Core Concepts:** Object-Oriented Programming (OOP), Data Structures, SDLC, Agile Methodology, Debugging, API Integration

Technical Experience

Signcrypt – AI-Based Assistive Communication System *TensorFlow, FastAPI, TFLite, MediaPipe, React*
🌐 Live 📄 GitHub

- Designed a multi-modal assistive communication system integrating **sign language recognition**, Morse gestures, text-to-speech, and secure messaging.
- Trained and optimized ML models using **TensorFlow and MediaPipe**, deployed with **TFLite**, achieving **92%+ accuracy**.
- Developed backend services using **FastAPI** with real-time data processing and RESTful endpoints.
- Implemented SOS alerts, encrypted communication flows, and modular cloud-ready services.

Eventz – Full-Stack Event Management & Ticketing Platform *React, TypeScript, NestJS, MongoDB, JWT, Razorpay*
🌐 Live 📄 GitHub

- Developed a full-stack event management system using **React, TypeScript, NestJS, and MongoDB** following **SDLC best practices**.
- Designed and consumed **RESTful APIs** for authentication, event management, and user workflows.
- Implemented secure **JWT-based authentication** and role-based authorization using **OOP principles**.
- Integrated **Razorpay payment gateway** with server-side validation, error handling, and transaction verification.

Mobile Applications – E-Commerce & Campus Monitoring Systems *Android, Java, Firebase, WebView*
📄 GitHub

- Developed a production-ready Android e-commerce application using **Java and Firebase**.
- Built a campus mess monitoring system with **role-based access**, complaint tracking, and real-time updates.
- Implemented secure client–server communication and WebView-based interfaces.

Certifications

- **IBM:** Introduction to Generative AI, Cybersecurity Basics
- **HackerRank:** Java Programming (Certified)
- **NPTEL – AI: Search Methods** — 79%, **Elite + Silver**
- **NPTEL – Cloud Computing** — 94%, **Elite + Gold (Top 1%)**
- **Deloitte-Relevant Skills:** Java, Cloud Fundamentals, Cybersecurity, Software Engineering Practices

Achievements

- Secured **2nd place** at RGUKT Hackathon for a scalable mess monitoring system.
- Published **Tanizkart E-commerce App** on Google Play with **100+ downloads**.
- Served as **Student Secretary – E-Cell**, organizing a campus Startup Expo.
- Selected as **Google Student Ambassador**, promoting Google technologies and developer programs on campus.
